SUMMARY

CS (Data Science) undergrad with hands-on experience across incident response, network/cloud security fundamentals, and SOC operations — built an autonomous incident-management agent pipeline, an ML-driven network intrusion detection & scoring dashboard, and an NLP-based evaluation system. 500+ LeetCode problems solved. Certified across Palo Alto (network and SOC security tracks) and Red Hat Linux; looking to bring that security-engineering + full-stack build experience to a Cybersecurity-focused Software Engineering role.

TECHNICAL SKILLS

- **Offensive & Defensive Security:** Ethical Hacking, VAPT (Vulnerability Assessment & Penetration Testing), Digital Forensics, Malware Analysis & Reverse Engineering
- **Security Operations:** SOC, Incident Response, Incident Handling, Cyber Kill Chain, CIA Triad
- **Systems:** Windows, Linux (Red Hat), OS Fundamentals
- **Languages & AI:** Python, JavaScript (ES6+), C, C++, LLMs, Multi-Agent Systems, NLP
- **Full-Stack / Tech Stack:** MERN (MongoDB, Express.js, React.js, Node.js), REST APIs
- **Data & DB:** MySQL, MongoDB
- **CS Fundamentals:** Data Structures & Algorithms (Arrays, Trees, Graphs, DP, Greedy), OOP, DBMS, OS
- **Tools:** Git, VS Code

EDUCATION

G.L. Bajaj Institute of Technology and Management (Dr. A.P.J. Abdul Kalam Technical University)

- B.Tech, Computer Science & Engineering (Data Science) | Aug 2023 – Aug 2027 | CGPA: 8.51

PROJECTS

Real-Time Network Intrusion Detection System — *Python, Machine Learning + Dashboard*

- Trained an ML classification model that scores live network packets as risky or safe in real time, surfacing predictions on a monitoring dashboard.
- Built a login-gated dashboard for drilling into per-packet risk scores and full packet-level detail, securing access to sensitive traffic data.

Incident-Metrics — *Multi-Agent Incident Management System (Python, Node.js, Agentic AI)*

- Architected a multi-agent pipeline in which independent agents autonomously generate resolution plans for incidents, removing a manual triage step from the support workflow.
- Built a dedicated agent that scans the queue for incidents with an empty assignment group, auto-assigns them to "Incident Management," writes an audit work note, and returns a live count of records updated — fully autonomous, no human trigger required.
- Implemented severity–urgency mapping with filters by state, category, and assigned group so agents prioritize the highest-impact incidents first.

PrepWise — *Python, AI-Powered Interview Assessment Platform (NLP, LLMs)*

- Built an NLP evaluation engine that scores candidate responses and computes a selection probability for domain-specific mock interviews.
- Generated automated, structured feedback per response, replacing manual review with instant scoring.

CERTIFICATIONS

Palo Alto Networks:

- Cybersecurity Foundation
- Network Security Fundamentals
- Security Operations Fundamentals

Udemy:

- SOC Analyst L1 & L2 Masterclass

Cisco:

- Ethical Hacker

Oracle:

- Agentic AI Certified Foundations Associate
